

Rosti Group implements D365 on 8 locations using a template

"The cooperation with Sprint365 has been really good, and that is absolutely essential."

This was not just an IT project, it was actually one of the largest and most important business projects we have had in recent times."

Lasse Bjørn Jensen
Group IT Director
Rosti Group

SITUATION (what was the problem?)

Rosti Group had several different ERP systems around the world (Dynamics AX, IFS etc.), most of which had been tailored to the company. Furthermore, the systems existed in different versions, and several of them were getting close to "end of life".

Local charts of accounts and cost structures appeared, as well as a myriad of local/personal Excel sheets and BI applications. It was almost impossible to achieve transparency in the business.

The management came to the conclusion that there was a need for a dramatic modernization and standardization of business processes and systems. A line had to be drawn in the sand.

SOLUTION (what did they do about it?)

They wanted new thinking in the ERP area and they didn't want a new, complex solution with many special adjustments. Instead, they chose the template-based approach from Sprint365, which gave **Rosti Group** a finished and ready-to-run concept, based on standards.

It was important that the solution could be easily rolled out in the individual countries, and that the system could be continuously updated, so that you could ensure that you did not fall behind again.

RESULTS (what did they get out of it?)

- A standard system that can easily be kept up-to-date
- An audit template that arose directly from the Sprint365 template
- A flexible solution that ensures that you never get stuck again
- Minimal involvement & time consumption for **Rosti Groups** own people and resources
- A price that was significantly lower than previously experienced

Rosti

About Rosti Group

Rosti is a global plastic injection moulding company and contract manufacturer to some of the world's leading manufacturers in the packaging, consumer appliances, business machines, home automation, medical and automotive sectors.
